Palette

## Your custom computer interface

paletteUI.com

People are unique.

Why should the interface be a *one-size-fits-all* keyboard and mouse?

Palette is an interface that conforms to you, not the other way around. This adaptation removes accessibility barriers and increases productivity for users of all abilities.
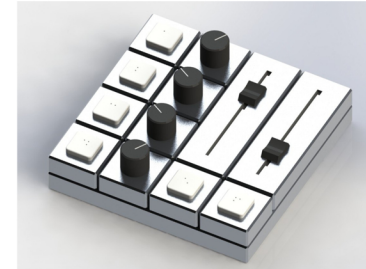

Plug and play.

Intelligent modules (buttons, dials, sliders, or any physical input) plug into the platform in any layout and connect to a computer via USB. These inputs are assigned to functions in software and can be changed at any time using the desktop configuration utility.
